

The Most Important Oral Dose Life Cycle Extension Strategies

For companies considering life cycle extension strategies for their oral dose products, there are clear preferences as to which strategies they would pursue. While strategies like *Abuse deterrent*, *Fixed dose combinations*, *Taste masking*, and *Use of nanotechnology in drug delivery* were also mentioned, the four strategies below are the most commonly considered.

"Select each of the life cycle management strategies your company is currently considering or has acted upon within the past year for oral dosage products." (n=66)
